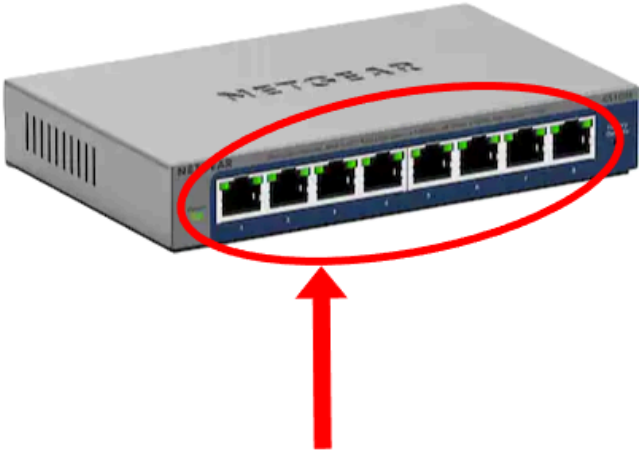
Solid White light = The ISP is working (GOOD)

Solid Green light = Valid network link (GOOD)
Blinking Green light = Data transmission (GOOD)



Solid Green/Yellow light = Valid network link (GOOD
Blinking Green/Yellow light = Data transmission (GOOD)

ALL OTHER LIGHTS WHEN HAVING INTERNET ISSUES PLEASE REPORT TO YOUR SYSTEM ADMINISTRATOR: SAMUEL HERMAN

Simple Troubleshooting

1. **The "Single Device" Check**
    a. Check if another device (like a TV, phone, or PC) can access the internet.
    b. If one device works and yours doesn't, the network is fine! Try restarting your device.
2. **The "Ethernet Cable" Check**
    a. Unplug: Gently press the plastic tab and pull the cable out.
    b. Inspect/Clean: Inspect for obvious damage; blow a quick puff of air into the port and cable end to clear any dust.
    c. Plug In: Push it back in firmly until you hear or feel that distinct 'Click'.
    d. Verification: Check the lights. They should match the Red Circles in the picture above. (Note: It can take up to 60 seconds for lights to start flickering).
3. **Reboot Hardware**
    a. Unplug the White Box (AT&T) AND the Silver Box (HP Router)
    b. Wait 30 seconds
    c. Plug the White Box back in. Wait for the white light to stay solid (apox. 2 minutes).
    d. Plug the Silver Box back in. Wait 2 minutes for flashing lights on back
    e. Total internet recovery can take up to 5 minutes
4. **Contact System Administrator**
    a. If all of the above steps did not work, call Samuel Herman for assistance
